Training Glass Installation

For technical operating staff

Büchi glass pilot plants are designed and manufactured for long-lasting operation in the chemical and pharmaceutical industry. Our products comply with current guidelines, standards and regulations of industry and authorities.

With this training we offer our customers the opportunity to get familiar with various subjects in glass plant engineering with the goal being able to service and maintain glass plants largely themselves.

The unique büchiflex flexible glass joint facilitates the maintenance of our glass plants and greatly reduces downtime. Maintenance of our glass plants as well as other subjects will be reviewed and trained as practical hands-on examples.

The following topics are included in the instruction:

- Glass catalog, products and material
- Glass construction training at training facilities
- GMP
- ATEX
- Automation

Special trainings for maintenance of shell and tube heat exchangers etc. will be held upon request.

Location	at Büchi AG in Uster, close to Zürich
Cost	CHF 650.00, incl. training documents and meals
Duration	2 days
Dates	10./11.05.2022 in English 12./13.05.2022 in German
